

## Green For Micro Programme

The Wicklow Local Enterprise Office offers the Green For Micro programme for small businesses in County Wicklow with up to 10 staff. The programme is free to undertake, and participating businesses can achieve significant cost savings in their operations. The programme helps prepare small businesses for the low carbon more resource efficient economy of the future.

Participating businesses get support through webinars and mentoring. An individualised report and action plan is produced for each participant. The report will identify how the business can become more resource efficient using less energy, water and materials. Participation in the programme will help a business become more resilient in a world which increasingly must focus on delivering climate action.

The programme offers tools to lower the environmental footprint and greenhouse gas emissions. Participating businesses will also benefit from an improved business image and increased access to customers.

The programme delivers on SDG 8 Decent Work and Economic Growth, SDG 12 Sustainable Consumption and SDG 13 Climate Action.
